TRADE LIST

Spring, 1914

CUSTOMERS are requested to state the mode of conveyance by which they desire their trees forwarded, When no route is named, we forward to the best of our judgment, without liability for error or delay.

RESPONSIBILITY.—After goods are placed on board cars here, we assume no responsibility for their safe or prompt delivery, or any injury caused by delay in delivery by the transportation company.

ALL CLAIMS must be made upon receipt of goods.

TERMS CASH, on or before delivery to express or railroad agents, unless by special arrangement.

Two hundred and fifty, twenty-five or five of any one variety will be furnished by the thousand, hundred and ten rates, respectively, but single plants of one or more varieties will not be sold at less than 15 cents each, except Vine and Herbaceous Plants, the minimum price of which will be 10 cents each.

PACKING CHARGED EXTRA, but only sufficient to cover cost of time and material consumed in the work.

POST OFFICE ORDERS payable at Dresher P. O., Montgomery County, Penna.

WESTERN UNION TELEGRAPH, AMBLER, PA. Use Nurserymen's Telegraphic Code or "A B C" Code, 4th edition.

VISITORS are always welcome and should take train at the Reading Terminal, 12th and Market Streets, Philadelphia, for **Camp Hill Station**, or at Broad Street Station, Pennsylvania R. R., for **Fort Hill Station**. Be sure that the train stops at these stations.

NOTICE.—It is necessary that you should **TELEPHONE** us (Bell Phone, 226-A Ambler; Keystone Phone, Jenkintown 652-Y), in advance of your coming, so that we can send a carriage to the station for you. Our office is $2\frac{1}{2}$ miles from either station.

CERTIFICATE OF INSPECTION

Our nurseries are inspected several times each year, by inspectors of the Entomological Division of the Department of Agriculture of the State of Pennsylvania, and are free from insect pests and diseases. A certificate from the Department is attached to all shipments, and will also be furnished to customers if desired.

Deciduous Trees

Several years ago we realized that there would shortly be a demand for a better grade of shade trees than were being commonly sold in nurseries at that time. With this idea in mind we commenced transplanting large blocks of all varieties, selecting only nice, straight, first-class trees for the purpose, discarding any crooked or ill-shaped stock. Time has proven the wisdom of our foresight, and while the demand for this class of stock has been greater than our expectation, our supply has been sufficient to meet the demand, and though our sales last year on these trees were very heavy, we again have a good supply on hand for this season's sales.

Our object is to grow a first-class tree, well rooted, with straight trunk and a nice top, and we spare no expense to produce a tree of this character. All crooked trees are discarded. Every tree we send out is a good tree. We stake all of our trees with long bamboo poles, and in that way we get not only a perfectly straight trunk, but a stem right to the top of the tree. This should be kept in mind when comparing our prices with the "cheap" trees usually offered.

Japanese Maples

Why buy cheap imported Japanese Maples, hide-bound stock, poorly rooted, varieties badly mixed up and untrue to name, when you can buy healthy American-grown plants well rooted, vigorous and well-developed tops, guaranteed true to name and at a price very little higher than the imported stuff. All of our Japanese Maples are propagated in our nurseries and are guaranteed true to name.

An Important Innovation

If you knew that you could get Sweet Gums, a hardy strain, grown from seeds collected as far north as Philadelphia, and get 90 to 95 out of every 100 to grow, would it interest you?

That is the proposition we are making to you.

The great objection planters make to using the Sweet Gum is the difficulty in getting it to grow. It is the most beautiful tree in cultivation, adapted to all landscape work and a magnificent tree for street, avenue, and boulevard planting. It thrives particularly well as a shade tree in city streets and would be largely used, if it could be transplanted as successfully as other shade trees.

We have a method by which we can dig our Sweet Gum with a solid ball of earth, just as choice evergreens are successfully handled, and which will insure your getting from 90 to 95 per cent. to grow. The photograph shows one of our trees dug and burlap balled.

When ordering trees be sure to say if you want them balled, as we also offer them dug without ball at regular list price.

Cost of packing trees in bales or boxes would be additional. If sufficient quantities are taken to warrant shipping in bulk in car, the freight would be less, and there would be no charge made for packing in the car.

Illustrates how we Ball and Burlap Sweet Gums

Platanus Orientalis European Plane or Sycamore

One of the fastest growing shade trees, in great demand for street planting. It makes a large tree of regular growth of top.

We have a lot of very fine trees in the sizes quoted in catalogue. Our trees have straight trunks, and are mostly branched five to seven feet from the ground, according to the size of the tree offered.

Specimen Shade Trees

This is a particularly fine lot of Specimen Shade Trees for planting for immediate results. These trees were transplanted four years ago and set ten by ten feet apart in nursery rows, allowing ample room for top development. They are abundantly supplied with fibrous roots, have good straight trunks and well developed, symmetrical tops. They are mostly branched from six to eight feet from the ground.

When ordering from this list be careful to mention these "specimen trees."

Deciduous Shrubs

We continually try to impress upon our customers the fact that the mere height of a shrub does not indicate its value, but that its "bushiness" must also be taken into consideration. Shrubs grown closely in nursery rows must necessarily make height, but the "bushiness" is sacrificed. A good, bushy, two to three-foot shrub is worth as much as a "slim" three to four-foot plant, and for results it is worth more.

We grow our shrubs in wide rows and allow plenty of space between the plants in the rows to permit them to develop properly. It costs more to grow shrubs this way than where they are grown closely together, as we cannot plant as many on an acre. In comparing our prices with those of other growers, this fact should be given consideration.

Juniperus Japonica Aurea

Golden Japanese Juniper

A dwarf, golden variety of the Japanese Juniper, having habit of growth similar to the Savin Juniper. It is useful to impart color to a group of other evergreens, or for planting in the foreground of masses. Perfectly hardy and especially adapted to shore planting as the sea air tends to liven the beautiful golden color of its foliage.

This cut illustrates our method of digging all evergreens with a ball of earth and sewing the ball in burlap. We were the first to handle evergreens by this method. Now it is almost universal.

Evergreens

See also Evergreen Shrubs

In no other class of nursery stock are prices usually so deceptive as they are in evergreens, because the height shown in the list gives no idea of the quality. Quality is represented by the bushiness of the plant and the number of times it has been transplanted, because transplanting is what produces the fibrous root system, so all important to an evergreen. Good feeding is also necessary to impart health, vigor and the rich color to the foliage.

Our aim is to produce the best. Health, vigor, good color and an abundant root system, and to accomplish this, we transplant our evergreens every two years into new, heavily manured ground.

All evergreens are dug with ball of earth and the ball sewed in burlap. The cost of this is included in the price quoted in the catalogue.

4 to 5 ft.	35	00

Abies Veitchii is a Japanese Fir, thoroughly tested and found to be perfectly hardy in the United States and is one of the finest evergreens. In form of growth it is like the Silver Fir. The under side of the foliage is a silvery-grey which imparts a soft, handsome tone to the plant.

Cupressus Lawsoniana Alumi, Blue Lawson's Cypress	
2½ to 3 ft.	12 50
3 to 3½ ft.	15 00

All evergreens balled and burlapped at the prices listed.

Juniperus Chinensis

Chinese Juniper are useful for filling in evergreen beds. They naturally make a close growth though not solid like the *Chinensis argentea variegata* type. The foliage is light green in color.

Junipers for Ornamental Planting

Throughout the entire list of Evergreens there are none so useful as the Junipers. First they have the advantages of hardiness, and adaptability to almost all soils and situations. Then they have a character all their own, and the great diversity of color of foliage makes it possible to plant an entire bed or group of them without the use of other species which may not be as hardy or satisfactory. We have gradually been extending our plantings of these Junipers until now we believe we have one of the largest and finest collections in any nursery in this country.

Juniperus Canadensis, Canadian Juniper

2 to 2½ ft. 15 00

“ **Canadensis aurea, Golden Canadian Juniper**

2 to 2½ ft. 15 00

This is not the spreading variety of golden Juniper. It is of upright habit. The spreading form is the *communis aurea*. We have none in stock.

All evergreens balled and burlapped at the prices listed.

Juniperus'
Chinensisargentea
[variegata]

This is one of the hardiest of the Junipers and used largely for massing in evergreen beds. It has a compact and symmetrical habit. The foliage is of light green color, tipped here and there with a yellowish white variegation. We consider this one of the best of the Junipers of this form of growth.

All evergreens balled and burlapped at the prices listed.

Juniperus Chinensis Pfitzeriana

This is without a doubt the most beautiful and graceful of all evergreens. It seems almost impossible to describe its beauty, and we must let the illustration speak for itself. The color of the foliage is dark green without shade or variegation of any sort. It is perfectly hardy anywhere in this country. We have unquestionably the largest stock of this wonderful evergreen in the United States.

Juniperus Sabina tamaricifolia

There are but few varieties of Creeping evergreens, and none so good as the *Juniperus tamaricifolia*. It creeps almost on the ground and is useful for rockeries or for planting edges of evergreen beds. The foliage is rich green with here and there a silvery tint. It is not a coarse grower like the *Juniperus recurva squamata*.

5	to 6 ft.	40 00

All evergreens balled and burlapped at the prices listed.

Juniperus Virginiana tripartita

The *Juniperus tripartita* is valuable as being unique in its character of growth. While the tendency of the centre stems is upright the side branches have almost a horizontal growth. In summer the foliage is green but as winter sets in it turns to a purplish-green color, which is quite attractive.

Juniperus Virginiana glauca
Blue Red Cedar

Everyone knows the Native Red Cedar, and there is no evergreen which just fills its place in landscape planting. This is a handsome variety of it, with steel blue foliage. Its hardiness extends to any part of the United States and Canada. We have probably the largest stock of this Blue Cedar in this country.

Retinispora filifera aurea

The golden thread-leaved *Retinispora* is a valuable plant to impart color to a bed of evergreens. While it may not be termed a dwarf evergreen yet being of rather slow growth and compact habit it may be used where a small growing evergreen is needed.

Retinispora Plumosa Aurea

The beautiful golden Retinispora is almost indispensable in evergreen planting. While of fairly rapid growth it may be kept any size desired by constant shearing, and this shearing adds to its beauty as the golden color is brightened on the new and young growth. We have a large stock of this magnificent evergreen, and in large sizes.

Hardy Herbaceous Perennials Ornamental Grasses and Ferns

Our Herbaceous Department is in charge of experts, men who are thoroughly trained in the growing, handling and shipping of these popular plants. By a thorough system of propagation and transplanting our stock is kept in the highest state of perfection, so that every plant we send out is young, vigorous and brought to a condition where it will give the customer the best results.

In making comparison of our prices with those of other nurseries bear in mind the fact that our plants are mostly field grown clumps and not the small divisions usually supplied by other growers.

July to September, etc., indicates the period of flowering.

BUDDING KNIVES

BUDDING KNIFE "D"

Next to the "Special" here is the knife for budders. Has a cocoa handle, a razor steel blade which closes, and the end of the handle is tapered to form a wedge for raising the bark.

Price, 35c. each ; 6 for \$2.00

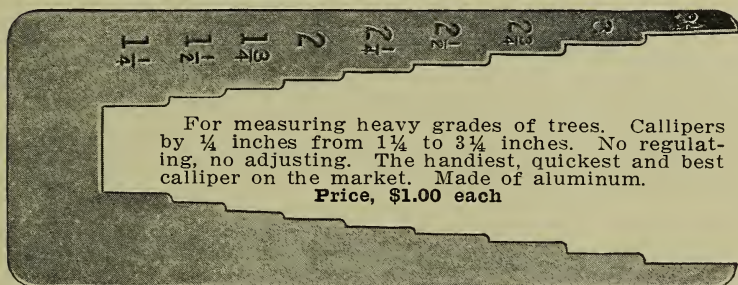

BUDDING KNIFE "C"

For anyone wanting a budding knife with a stationary blade, we recommend this knife to contain steel of high temper equal to any razor.

Price, 25c. each ; 6 for \$1.30

THE "HANDY" TREE CALLIPER

For measuring heavy grades of trees. Callipers by $\frac{1}{4}$ inches from $1\frac{1}{4}$ to $3\frac{1}{4}$ inches. No regulating, no adjusting. The handiest, quickest and best calliper on the market. Made of aluminum.

Price, \$1.00 each

THE "HANDY JR." TREE CALLIPER

Exactly like the above, but callipers only from 2-16 inch up to 1 inch.

Price, 65 cents each

"RED STAR" BRAND RAFFIA

"Red Star" Brand Raffia is the best all around grade of Raffia on the market. It is a guaranteed quality of good color and strength and at a most reasonable price. For general purposes it is unequalled. Its sales every year are greater than all other brands.

PRICES :

1 lb. & up @ 18 cts. per lb.
10 lbs. & up @ 15 cts. per lb.
25 lbs. & up @ 12 cts. per lb.
50 lbs. & up @ 11 cts. per lb.

100 lbs. & up @ 10 cts. per lb.
1 bale & up @ $8\frac{1}{2}$ cts. per lb.
2 bales & up @ $8\frac{3}{8}$ cts. per lb.
5 bales & up @ $8\frac{1}{4}$ cts. per lb.

Meehan's Mallow Marvels

SINCE the introduction of our Mallows several years ago, thousands of them have been widely distributed over the entire country and have given the utmost satisfaction. They are now specified in planting lists by Landscape Engineers, Superintendents of Parks and Cemeteries.

It makes a vigorous growth—strong roots making a bushy clump five to seven feet in one season and blooming profusely from midsummer to frost. Being an herbaceous plant it dies to the ground in the fall, shooting from the root again the following spring.

The flowers measure from eight to twelve inches in diameter, and are sold in separate colors, in red, pink and white.

The plant is extremely hardy, having been tested and grown in all parts of the United States and Canada.

It grows naturally in moist ground but thrives equally as well in any good, rich soil.

Beware of Imitations offered under other names.
